

« LA SOURCE CAMPSITE »

Dear campers,

We are happy to welcome you in our campsite.

We pay great attention to the respect of Nature and Environment.

For us, for you and the future generations, we endeavour to minimize the impact of our activity on the environment.

Therefore :

WE SAVE WATER AND ENERGY

- Drip irrigation is used to water trees and plants in order to save water (irrigation water is used)
- Irrigation water is used in the flush toilets in the sanitary block.
- Solar panels preheat a swimming-pool in low season and preheat water in the sanitary block in summer.
- Electricity and water meters are read each month.
- Whenever a light bulb has to be changed, it is replaced by an energy saving light bulb. 72% of our lighting has been replaced.
- Flow restrictors have been installed in the accommodations, on taps and showers so as to save water.

WE SORT OUT OUR WASTE

The rules for sorting out waste have changed:

* There is a container for **glass** (pots, jars, bottles ...) near the Reception at the entrance of the campsite.

* In the **yellow bins** (for paper, Tetra Pak packaging and cardboard packaging, plastic bottles and flasks, metal packaging) you can, from now on, put **ALL OTHER PLASTIC PACKAGING.**

- Used batteries are collected at the Reception.

- **Two solutions for your kitchen scraps: either the mini-farm** where our hens, ducks, goats will enjoy them! (stale bread, peelings, food scraps...) or **the compost bin** which is located near our small communal vegetable garden. **If any doubt, ask us!**

WE TRY TO FAVOUR LOCAL PRODUCTS

- Local products can be found at the Reception / Bar: organic apple juice, olive oil, honey, terrines, jams, wines....
- Once a week a local fruit and vegetable producer comes and sells his products: courgettes, tomatoes, onions, garlic, melons, fruit juice ...
- At the restaurant, some vegetables come from local producers (tomatoes, salads) as well as other products such as “caillettes”, sausages, ice-creams made in Ardèche, bread and pastries come from the village bakery

AND MUCH MORE

- Our green areas are managed without pesticides and we use alternative methods to remove weeds and pests.
- We replace trees by native species, more adapted and with low water demand (hackberries for example....)
- Green waste is composted and re-used all over the year.
- We use environment-friendly cleaning products: white vinegar, black soap, disinfectants in the sanitary block, descaling products, toilet paper, welcome-kits have an Ecolabel.
- We have had a mini-farm for some time and we have created a small communal vegetable garden.

Thanks for supporting us in our action while you are staying with us! Let us know your ideas or suggestions, we are all concerned!

Nathalie & Jean-Christophe
